

Case Study Industrial

Why Australian Fluid Handling chose Cherry.

? THE SITUATION

Australian Fluid Handling (AFH) is one of Australia's leading providers of customised and engineered compressors, pumps and skid packaged equipment.

With a wide range of industrial machinery, large warehouse space and long operating hours, AFH were well positioned to save by upgrading to LED lighting.

✓ THE SOLUTION

CHERRY  **LED**

Over 140 LED lights were installed; a combination of Cherry LED troffers, tubes, downlights, corn lights and oyster lights. These products will reduce AFH's lighting energy usage by 63% and, due to their lifespan of over 50,000hrs, reduce maintenance costs by \$700 per annum.

In collaboration with the Hobsons Bay City Council's Light\$mart program, Cherry Energy Solutions was able to help AFH access a local council rebate and, by installing Victorian Energy Efficiency Scheme approved Cherry LED products, AFH received an additional rebate of 30% off the initial install price.

After the installation, Dietmar Hildebrand, CEO reported receiving an excellent service, completed to perfection.
